

ARGES[®]
REMOTE SPOTLIGHT

WHELEN[®]
ENGINEERING COMPANY INC.

SAFETY

Arges® features a compact design that, when paired with Whelen's vehicle-specific mounts, helps minimize blind spots while driving. Its collision-safe control head eliminates the need for an internal handle, enhancing safety and ease of use.

OPTIC INNOVATIONS

PROCLERA®

Proclera Silicone Optics are engineered to provide less light distortion and up to 3x brighter light output, better directing light wherever it's needed.

Spotlight models: 5° spot

ProFocus™

ProFocus™ LED technology delivers versatility with just a single optic. Switch from spotlight or floodlight with no moving parts, and customize ProFocus to meet every need, increasing your visibility in any situation.

ProFocus models: 5° spot to 60° flood variable beam width

ARGES® & CORE®

Arges integrates seamlessly with Core, Whelen's advanced control system. When paired with Core and programmed via Whelen Command®, our user-friendly software interface, Arges allows for fully customizable lighting control and synchronized actions—all managed through a single, streamlined system designed to enhance officer safety and situational awareness.

PRECISION & CONTROL

Limited visibility poses a serious risk to first responders in critical moments. Arges® provides full 360° visibility and 180° tilt, ensuring complete coverage and confident illumination in any situation.

CONTROL HEAD

Arges® features a control head with a paddle and three push-buttons. Intuitively designed, its small size provides versatile mounting options. Operate multiple lights with a single controller.

- The paddle rotates and tilts Arges for full control and maintains a 1:1 relationship with the lighthouse.
- The home button moves Arges to the home position. When Arges is not in use, the home position is aerodynamic and inconspicuous. Double-tap the home button to auto-sync the controller position.
- The indicator light on the paddle will illuminate red when the paddle is in control mode for operation with the control head. The indicator light will illuminate blue when the control head is idle and Arges is in manual override mode, allowing the spotlight to be manually moved when standing outside the vehicle.

RUGGED DESIGN

Arges features a Black die-cast aluminum housing. Its drivetrain is electronically and mechanically protected for optimal durability.
